Challenge

Finding the missing and getting them on treatment

- Increase access to HIV services/ Testing
- Ensure client centred focus of BSmart Chart
- Improve health outcomes for service delivery
- Strengthen peer navigation
- Reduce stigma and discrimination on the accessibility of service by key populations (KP)

Retaining clients on treatment and ensuring viral suppression

- Increase retention by implementing intensive follow-up counselling
- Intensify/strengthen the existing case management approach
- Increase adherence to ART to ensure viral suppression

Operational /Capacity building

- Patient flow challenges resulting in long wait times in facility settings
- Longer periods, drug prescribing and dispensing practices
- Establish program, service and patient needs

Prevention, specifically detailing programs for priority programming

- Biomedical prevention planning
- Reduce risk and vulnerability

## Introduce and scale-up Continuous Quality Improvement (CQI)

- Increase quality of services

Solution

SmartHIV Clinician

Supports clinicians to provide the best possible treatment outcomes with all disease related complications for their patients, i.e., treatment strategies personalized and made precise for their patient.

BSmart Chart App

Supports HIV patient's day to day management of their disease, e.g., adherence, nutrition, cognitive, emotional support, medication management, social discussions and the ability to connect with their clinicians in real time.

SmartHIV Manager

Supports HIV service managers in better planning of services and public health programs and identifying patient needs. Policy makers can establish needs at local, regional and national level.

HIV Smartlytics

Supports HIV practitioners by streamlining the process of collecting and analysing massive amounts of data via an EMR integrated advanced analytics and visualisation platform.

SmartHIV Trialist

Supports clinical researchers in academic or private organizations in HIV patient recruitment, retention, engagement and getting newly innovative products to patients through clinical trials.

Benefits

- Decrease the number of new infections
- Improve the health outcomes for PLWH
- Improve the quality of behaviour change communication
- Reduce discriminatory attitudes towards PLWH
- Minimize loss to follow-up and increase adherence
- Improve care outcomes and enhance patient's experience
- Improve the quality of life and overall health & well-being
- Eliminate the symptoms of inefficiencies in the system
- Reduce long wait times, as waiting impedes patient's ability to benefit from treatment
- Be prepared for all eventualities well advance
- Reduce risk, stigma and vulnerability to HIV infection
- Benefits all stakeholders in the fight against HIV/AIDS
- And many more….
